

Jonathan Draney

Software Engineer | Games Engineer

West Jordan, UT 84084

(801) 403-9086 | jonathandraney@outlook.com | github.com/jondra-dev | Portfolio: jondra-dev.github.io

Education

Bachelor of Science in Computer Science, Emphasis in Entertainment Arts and Engineering
University of Utah — Salt Lake City, UT Grad: May 2026

Relevant Coursework: Interactive Computer Graphics, Database Systems, Computer Systems, Programming Languages, Artificial Intelligence, Mobile App Development, Algorithms, Alternative Game Development, Traditional Game Development, Machinema

Technical Skills

- Languages: C++, C#, Python, SQL (MySQL), Java, Rust, Racket, Go, Bash, C, JavaScript, Kotlin
- Engines, Tools, and Operating Systems: Unreal Engine 5, Unity (2022, 6), Visual Studio, Visual Studio Code, OpenGL, Git/GitHub, Perforce, Windows 10/11, Linux (Ubuntu)
- Core Competencies: Computer Graphics (BRDFs, Rendering Pipelines, Custom Shaders), Low-Level Systems & Computer Architecture, Data Structures & Algorithms

Curated Projects

Spellcatcher (Published on Steam) August 2025 - April 2026 Lead Engineer | Unity 2022

- Served as Lead Engineer over a 3-person Engineering subteam within a 15-person cross-disciplinary team over a two-semester game development cycle to publish a title on Steam.
- Architected core gameplay systems and repository workflow standards, enforced branching workflows and project organization, refactored systems including other engineers' code.
- Coordinated with Lead Producer and directly with other Team Leads of Art and Design subteams to prototype, iterate, and realize features.

SHADER (Render Engine) March - April 2026 Graphics Programmer | C++ | OpenGL | GLSL

- Built a deferred rendering pipeline framework implementing custom shaders using BRDF material shading models.
- Built various demo features to showcase real-time performance contrasts between deferred and forward render pipelines including variable light and triangle counts, animated objects, and deferred rendering textures representation.

Systems & Engine Prototyping (Independent) May - August 2026 Independent Engineering

- Built CLI tools in Rust and Bash, and a TUI tool in Go, that share a backing SQLite database.
- Experimented in recreating game mechanics and learning new engine features in Unity 6.4.
- Prototyped a client-server multiplayer project utilizing server replication, RPCs, and custom state synchronization in Unreal 5.7.4.

Experience

Utah Spine & Accident Clinic, West Jordan, UT — Insurance Biller 2016 - PRESENT

- Advanced through progressive roles: Chiropractic Assistant, Front Desk Reception, Medical Billing.
- Oversaw front desk operations, including: scheduling for up to 10 concurrent medical providers, patient interaction and documentation, and interactions with insurance companies and attorney offices.
- Managed medical billing and claim pipelines, auditing received 835s and ERAs, resolved disputed health and auto insurance claims, and fulfilled attorney requests and legal subpoenas. Balanced patient accounts against insurance adjudication.
